

Simulation and Optimization... from the Forest to the Finished Product

HALCO Software Systems is a leading developer of operations analysis and optimization models for the forest industry, and supplier of consulting services using these models. We are located in Vancouver, Canada. Our client list includes most of the major forest products companies in North America and abroad.

We have an immediate opening for a:

Wood Products Operations Analyst

We require someone with proven analytical skills to develop and implement these models. The successful candidate should have a degree in engineering, forestry, mathematics, or one of the physical sciences.

We require someone to work directly with clients on model development and implementation. Experience with sawmill or wood panel operations would be a definite asset, as would experience with simulation analysis or linear programming optimization.

We offer technically-challenging work in a stimulating environment, where people are encouraged to realize their potential.

Please visit our web site at www.halcosoftware.com for more information.

Please send resume and covering letter to:

HALCO Software Systems Ltd.
