

Plant Maintenance Lead

As an integral member of the Zavisha Sawmills Team, the Plant Maintenance Lead is responsible for developing and maintaining a system of mechanical maintenance activities, ensuring the quality of maintenance repairs and the safety of those under their control. This role will focus on leading the maintenance team in mechanical time loss elimination, risk management and life cycle asset management. The ideal candidate will comply with all policies and report any issues that may harm the people, environment, information or product.

Responsibilities include, but are not limited to:

- Developing, implementing and coordinating maintenance work orders and schedules, as required, to maintain and optimize best practices for equipment performance and business requirements;
- Using preventative maintenance practices (TPM) and strategies to effectively respond to breakdowns, maximizing the (OEE) availability of equipment based on business needs, within budget;
- Preparing short, medium and long-term maintenance plans in alignment with business objectives;
- Analyzing and interpreting maintenance trends and variances, and initiating required corrective action;
- Providing leadership for best maintenance practices;
- Planning and coordinating shutdowns with internal and external clients in order to ensure the timely allocation of resources;
- Analyzing past records and history to forecast future needs and compiling annual budgets for plant maintenance;
- Developing solutions for repetitive failures and all other problems that adversely affect operations;
- Developing and maintaining a critical parts inventory;
- Directing team members to achieve individual and team objectives and assessing team member performance and implementing behaviour correcting measures if required;
- Developing and implementing training programs to ensure that team members are suitably trained to achieve requirements; and Ensuring all safety, health, environment and legal standards are met and maintained.

Requirements:

- Interprovincial Trades certificate with related experience;
- Minimum five (5) years' experience in plant maintenance, at a supervisory level;
- Certification in Six Sigma, Lean Management or TPM is considered an asset;
- Strong communication, organization, time management skills and excited about a challenge; and
- The ideal candidate will be a motivated self-starter who is comfortable leading change, while working in a team environment.
