GIS Analyst/ Forestry Data Manager

Econ Consulting is seeking a **GIS Analyst / Forestry Data Manager** to join our long established forestry consulting business. This position is office based.

Econ Consulting is a small, progressive forestry consulting firm based in the Comox Valley on Vancouver Island. Econ specializes in professional forestry providing a broad range of forestry and tenure management services to a long list of permanent clients, including woodlots licensees, First Nations, private land owners, government and larger tenure holders on Vancouver Island and coastal BC.

We are seeking a qualified individual to assist with GIS mapping, spatial data analysis and production, LiDAR application, engineering and silviculture data compilation, electronic data exchange with government servers, in-house and on-line data management.

The successful applicant will:

- Have a strong working knowledge of ArcGIS and be experienced in LiDAR data management as well as RoadEng and other common forestry applications.
- Be experienced with corporate IT/GIS data management, quality control and final product output.
- Be experienced with EFM applications (RESULTS, ECAS, MAPVIEW, HBS, GENUS, SPAR, etc.)
- Have a good working knowledge of silviculture survey procedures, compilation and e-submissions.
- Be highly motivated, team work oriented and solution driven.
- Demonstrate excellent communication and technical writing skills;
- Be well organized, detailed and be able to work independently on multiple projects.
- Be able to continuously improve the GIS operation and to streamline work processes.
- Strive to produce high quality services and products.
- Maintain a positive attitude and work environment.

Econ offers competitive remuneration, flexible scheduling and a professionally challenging and interesting work environment. Please send your resume and a cover letter to mail@econ.ca. We thank you for your interest, however only shortlisted candidates will be contacted. This position is open until filled.
